Profile Summary

Computer Science and Engineering (Data Science) graduate with hands-on experience building backend services, APIs, data-processing pipelines, and software systems with Python. Experienced with FastAPI, PostgreSQL, Docker, event-driven processing, REST APIs, WebSockets, and Git. Built projects involving transaction processing, reconciliation, real-time monitoring, financial systems, and ML-backed applications.

Technical Skills

Programming: Python, SQL, JavaScript,

Backend: FastAPI, REST APIs, WebSockets, API Development

Databases: PostgreSQL, Relational Data Modelling

Systems & Infrastructure: Docker, Redpanda, Event-Driven Processing, Git/GitHub

Machine Learning: Scikit-learn, XGBoost, PyTorch, Transformers, RoBERTa

Data: Pandas, NumPy, SciPy, Data Processing, Statistical Analysis

Tools: MLflow, Grafana, Prometheus, Streamlit

Projects

Idempotent Payment Processing & Transaction Reconciliation Engine

Python | FastAPI | PostgreSQL | Redpanda | Scikit-learn | MLflow

- Built backend workflows for idempotent payment requests, transaction states, processor outcomes, ledger records, and reconciliation.
- Designed REST APIs and PostgreSQL persistence for transaction processing, duplicate prevention, and consistent state handling.
- Built a transaction-level anomaly detection pipeline and evaluated Isolation Forest, Local Outlier Factor, K-means distance, and Robust Z-Score.
- Integrated anomaly inference and MLflow tracking into the application for API-driven assessment and versioned experiment artifacts.

Real-Time Trade Settlement Risk Monitoring System

Python | FastAPI | PostgreSQL | Redpanda | WebSockets | Docker | Grafana

- Built backend services for ingesting, storing, and monitoring trade-settlement events across transaction and settlement states.
- Implemented REST and WebSocket interfaces for accessing settlement data, risk indicators, and operational metrics.
- Designed PostgreSQL-backed workflows for transaction persistence and validation, with Redpanda for event-driven processing.
- Containerized backend services with Docker and built Grafana/Prometheus monitoring for settlement status, exposures, and system behaviour.

Education

Mohan Babu University, Tirupati

B.Tech in Computer Science and Engineering (Data Science) | 2026 | CGPA: 8.15/10
